

## ABOUT THE PROJECT

The CAT equipment will allow for 50 studies per week—over 2,000 annually—saving significant time in diagnosis, reducing discomfort for patients and families, and avoiding transportation and external study costs.

The CAT unit already has a maintenance service contract, along with a long-term technology upgrade plan.

Ongoing staff training will be provided, including training for residents.

The hospital administration commits to maintaining the operational budget for essential supplies, ensuring continuous and proper CAT use, and issuing periodic reports on key clinical indicators.

## AREA OF FOCUS

**Disease Prevention  
and Treatment**

## GLOBAL GRANT PROJECT

Improvement Program for  
Computed Axial  
Tomography (CAT) Studies  
and Emergency Care at  
the Children's Hospital in  
Tamaulipas

GG2686262

# COMMUNITY NEEDS

- Pediatric patients needing contrast-enhanced CAT scans must be transferred to external hospitals or labs, causing delays of up to five days and slowing diagnosis and urgent care.
- The emergency area also lacks radiolucent stretchers and adequate ceiling lighting, limiting timely and effective attention. These issues result in delayed diagnostics, reduced quality of care, increased medical risk, and additional study costs.
- The hospital is the only specialized pediatric facility in the state.

## CURRENT AND NEW EMERGENCY ROOMS

EMERGENCY ROOM: STRETCHER WITHOUT RADIOLUCENT CAPABILITY

CEILING LIGHTS UPDATED AND NOT WORKING TIME AGO

RADIO TRANSPARENT STRETCHER

SURGICAL LED LAMP 160,000 LUXES PANELEX 1
